

# Postman + Jira

Embed Jira directly into your team's API debugging flow

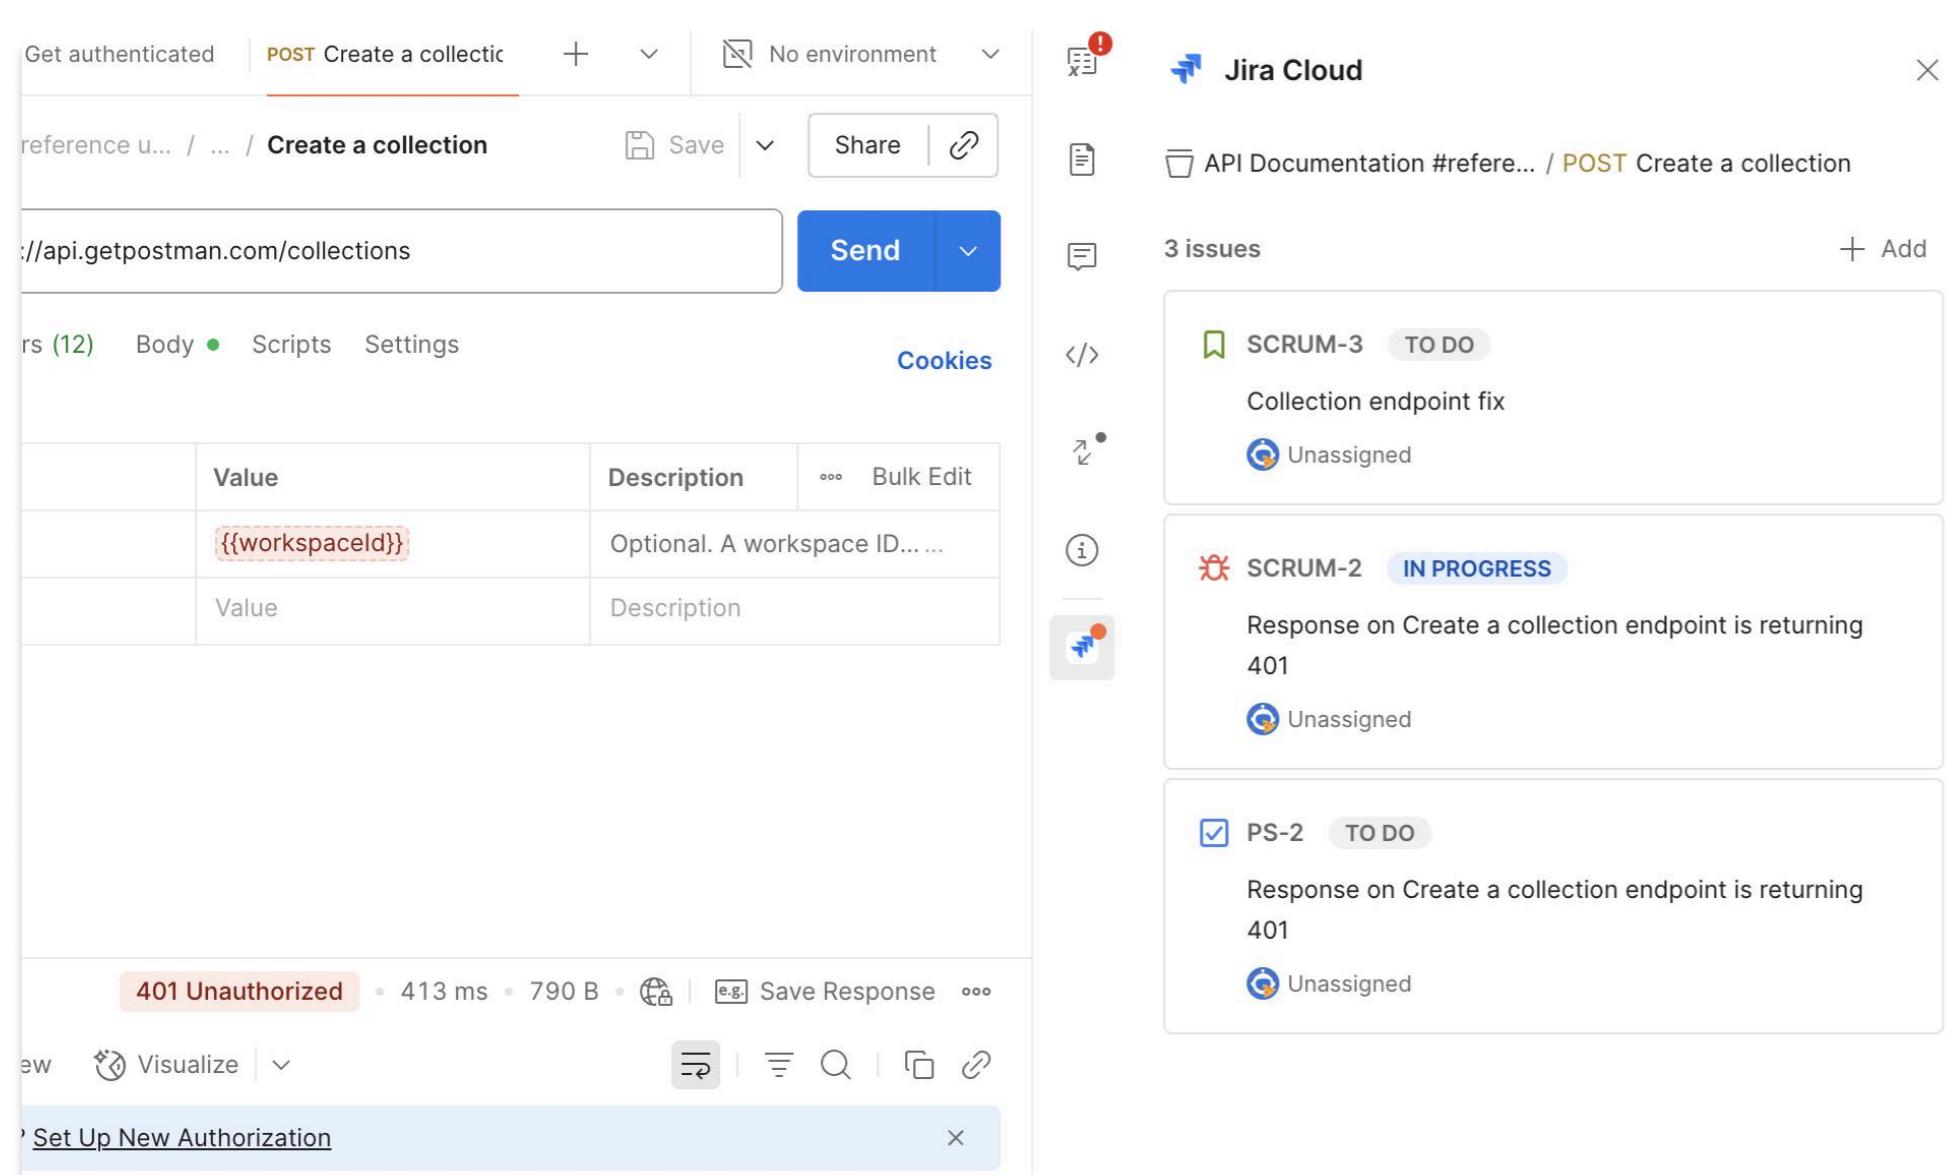

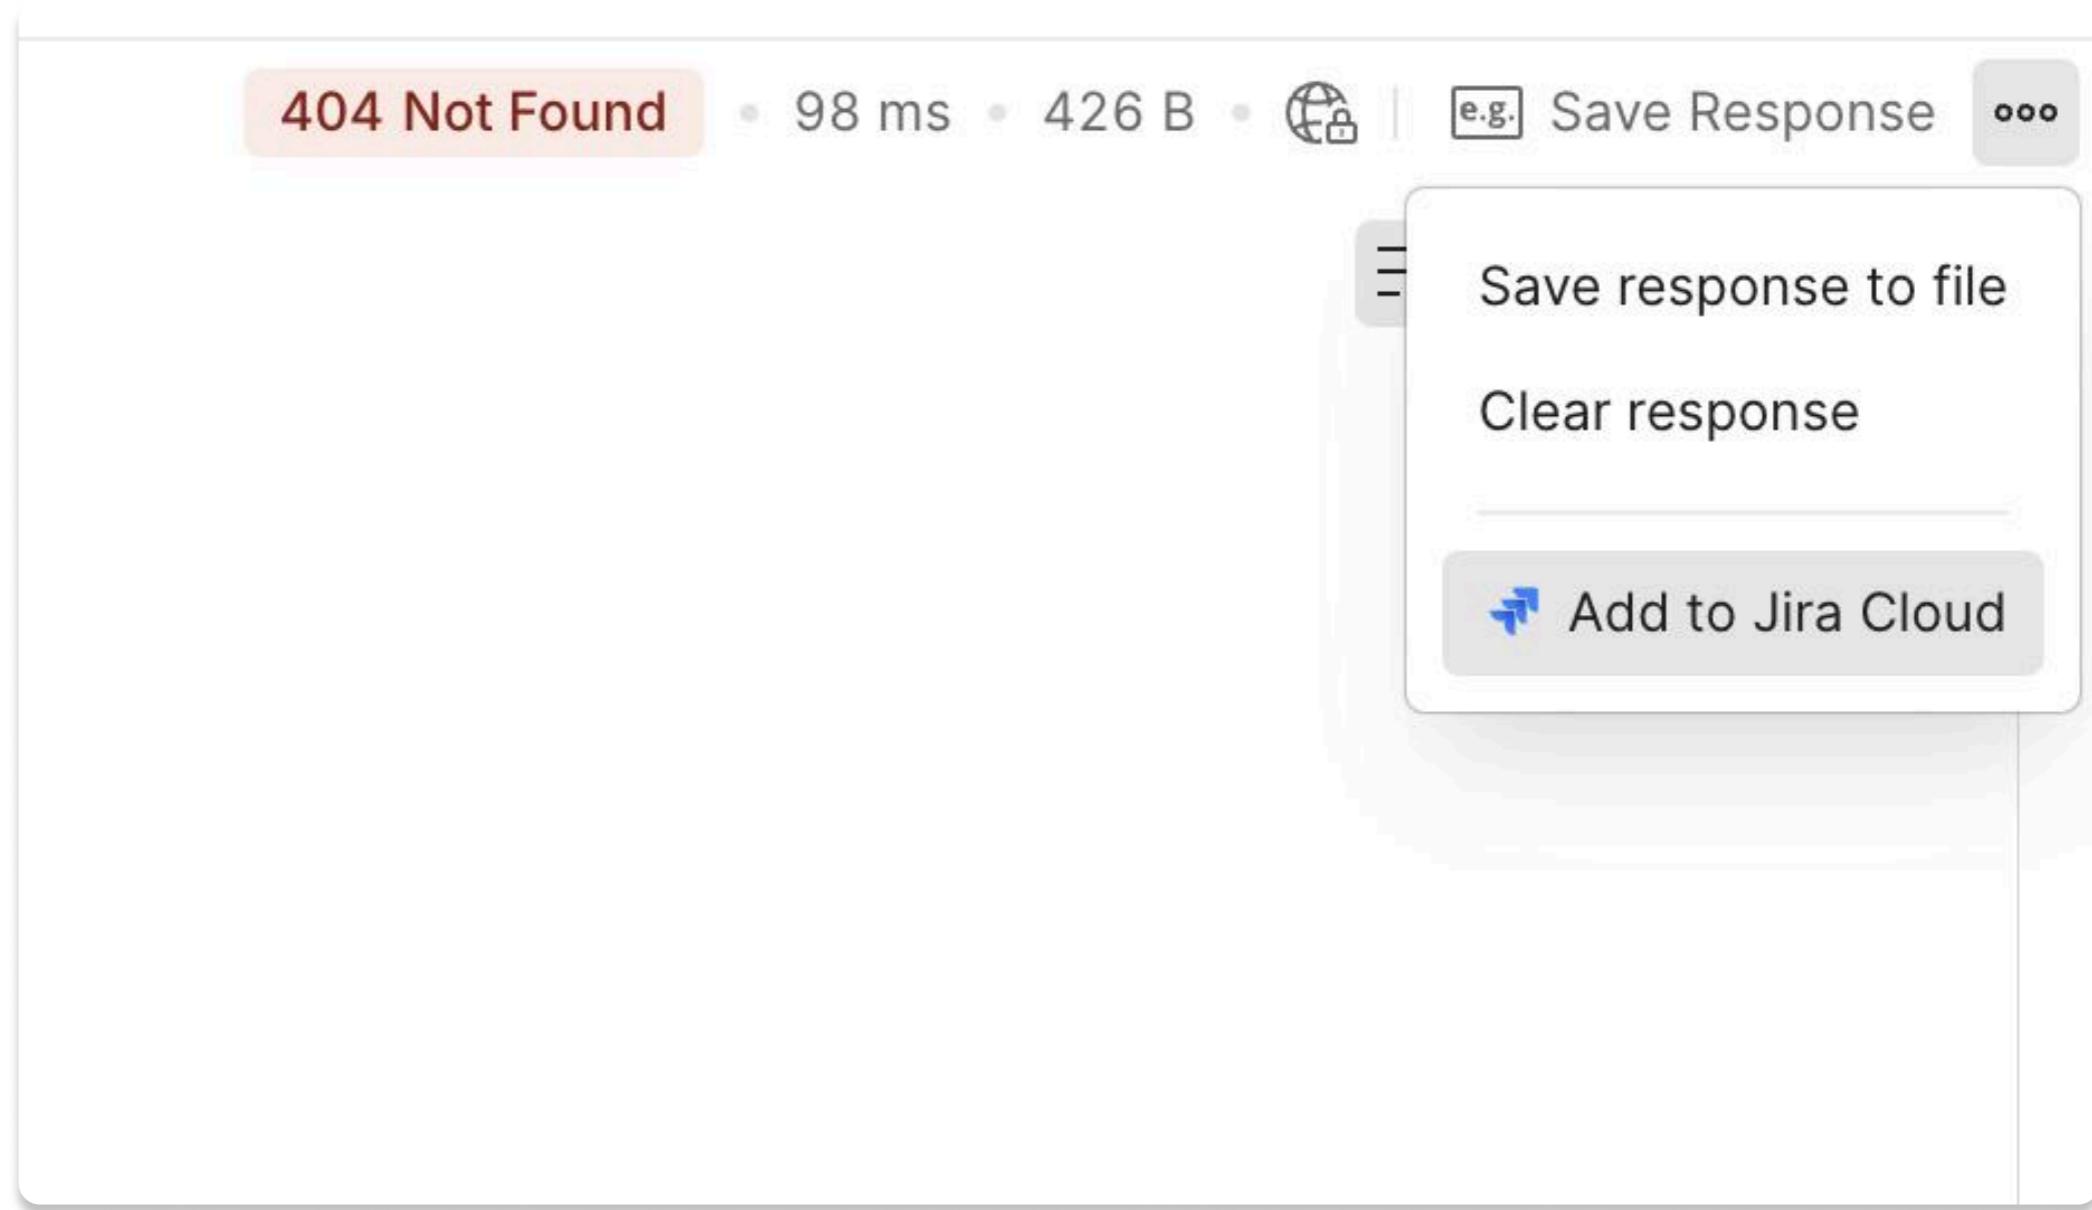

## RESOLVE ISSUES FASTER WHILE SPENDING LESS TIME IN JIRA

### Log Jira issues with the details needed to quickly reproduce and resolve

With Postman's Jira integration, you can log issues as you're troubleshooting in Postman.

- Create new or update existing Jira issues directly from Postman requests
- Context from Postman, including a link to the request, is automatically added to the issue to help teammates resolve it faster

### Collaborate efficiently with insight into existing issues

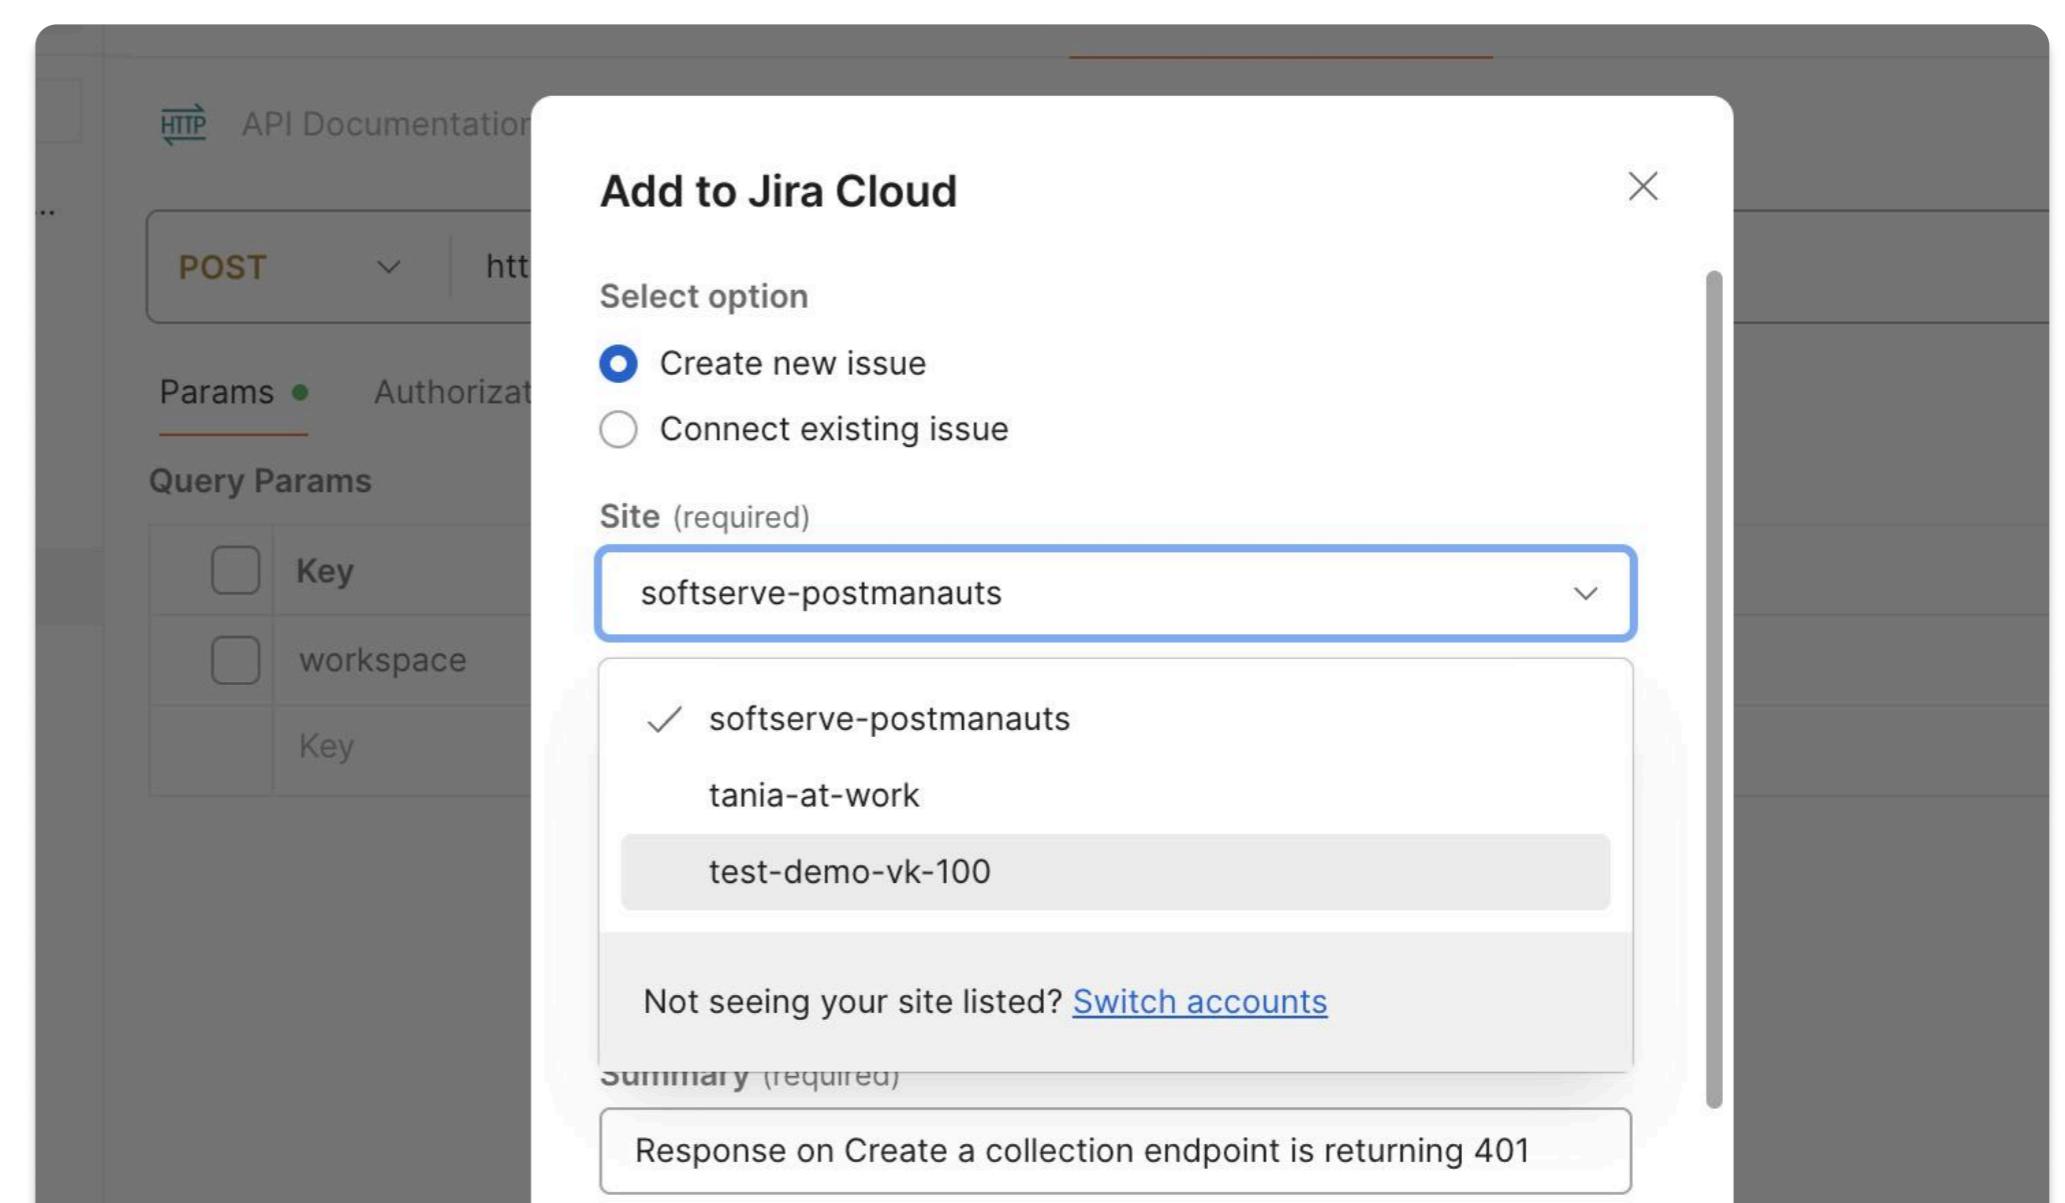

Get fast insight into your team's progress by viewing all open Jira issues from requests and collections.

- View issue status and assignee at a glance within Postman
- Jump directly into the Jira issue if you need to dig into the details

### Match your organization's Jira configuration

Log issues according to your organization's custom Jira setup, so everything's in place for quick resolution.

- Log issues across multiple Jira instances
- Fill in any required or custom Jira fields directly from Postman

### Why customers love Postman's Jira integration

**“Previously, I had to copy and paste everything into Jira. Now, with a single click, I can create a ticket with the response, along with the link to the API request. It saves me time and also reduces the risk of an error.”**

Danny Blok, App Developer, Nalta
